Updated:	2011-03-07	**Due date:**	

Remote issue URL:	
Affected version:	
Description:	In @lib/redmine/menu_manager.rb@ the rubytree gem is patched by Redmine/ChiliProject. During plugin development this regularly leads to Stack-Level-Too-Deep-Errors for me. This is caused by the unconditional aliasing of initialize. Because of this, I am unable to patch any functionality inside this source file, which includes the MenuManager and MenuHelper. I propose to fix the unfortunate style of patching. *Note:* I just want to fix my current itch. I guess, patching the rubytree gem itself might already cause some controversy, but this should IMHO not be discussed in this ticket. All I want to achieve is, that the given monkey patch becomes more robust.
