Affected version:	
Description:	Change outbound mail to be sent per-recipient.
	Instead of a single email that is sent out with all the recipients as CC/BCC, each recipient will be delivered their own email. This will let emails to be customized per user based on their permissions, without exposing private data.

[#674] Convert outbound mail to be sent per-recipient

Instead of a single email that is sent out with all the recipients as CC/BCC,
each recipient will be delivered their own email. This will let emails to be
customized per user based on their permissions, without exposing private data.

History
