Remote issue URL:

Affected version:

Description: H4 Headings are too small in toc. You can't read it (at least in current Chrome).

Currently observable at:

<https://www.chiliproject.org/projects/chiliproject/wiki/Installation>

I can not observe the same error on my local redmine 1.0.4.stable as H4s are not shown in toc. There seems to be a difference between my local installation and the installation on chiliproject.org. I can not fix it yet as I do not have any copy of the installation of chiliproject.org

I believe that should get fixed until the Bell release. I believe it is a bad idea to make the font size smaller with each indention. Just make all levels have the same font size.

- Status set to Open

2011-02-03 01:25 am - Eric Davis

- Category set to Themes

Is an issue with our custom theme.

2011-02-20 05:02 am - Eric Davis

- Priority changed from Low to Normal

- Assignee set to Eric Davis

- Category changed from Themes to User interface

- Status changed from Open to Closed

Actually I was wrong. This bug is present in all themes, it was part of the main application.css. Fixed in commit:f193d04
